

Connect **directly** to the Internet for reliable communications

Dedicated Internet Access provides you with high speed and dedicated Internet Access enabling your business to be more responsive. Achieve efficiency both simply and effectively with Dedicated Internet Access.

Dedicated Internet Access is an Internet access service, enabling access from your internal IP networks to National and International Internet services. Dedicated Internet Access is a proven performer for businesses that require a reliable and permanent Internet connection. Moreover, a range of bandwidth and pricing options mean that Dedicated Internet Access has the flexibility to meet your business needs.

We can also assist with additional services such as management and security, Domain Name Service and Hosted Mail.

KEY FEATURES

- **BANDWIDTH OPTIONS.** Dedicated Internet Access lets you choose the most suitable bandwidth for your business (up to 2Mbps). Plus you have the ability to upgrade your capacity as your needs change.
- **DIRECT INTERNET ACCESS.** Dedicated Internet Access is part of Telecom's family of Internet products connected directly to Global Gateway, Telecom's Internet Platform. The magnitude of this connection to the World Wide Web provides virtually no congestion. This direct access means your data reaches its destination faster and more efficiently.
- **PRICING PLANS.** Dedicated Internet Access can be provided with a comprehensive range of Usage or Flat Rate pricing plans. It is important that you make the right choice of Dedicated Internet Access service to ensure you receive the Internet performance your business requires. However, it is equally important to choose a pricing plan that matches your business needs and operations. Your Account Manager will be able to offer you advice on a range of plans that are suited to your needs.
- **ONLINE REPORTS.** Usage and traffic information reports are available online to help you optimise performance and resource allocation.
- **SPECIALIST SUPPORT.** Telecom has skilled and experienced staff on-hand to assist with the delivery and development of your business Internet requirements.

MEASURABLE BUSINESS BENEFITS

–	IMPROVES EFFICIENCY. Dedicated Internet Access gives you fast Internet access, reducing the time spent waiting for downloads and transfers.
–	BE MORE RESPONSIVE. Real time email minimises delays and improves the ability of your business to communicate quickly. It enables you to be more responsive, enhancing communication with your customers. Better communication with your customers can also be achieved by hosting your own website (i.e. not hosted by an ISP). Dedicated Internet Access gives you the necessary power to help provide users with a faster, more responsive experience of your site.
–	FLEXIBILITY. You can choose the level of bandwidth to suit your business needs when necessary. Tailor the service to your requirements and cut costs by paying for what you need.
–	RELIABLE COMMUNICATIONS. A proven and reliable access technology coupled with core network proactive management ensures you can experience the benefits of Dedicated Internet Access virtually hassle free – maximising business efficiency.

WHAT YOU NEED

To enjoy the benefits of Dedicated Internet Access you must have:

–	An established LAN infrastructure.
–	Premises located within reach of Telecom's data services.

Dedicated Internet Direct provides Internet access only. Accordingly, your security system needs to be customised for your own unique requirements. Your Account Manager can provide you with information about our secure Internet services.

IS IT FOR YOU?

Dedicated Internet Access is ideal if:

–	Your business has medium to large traffic volumes and you're looking for better performance and continuity than your existing access.
–	Your business manages its own 'edge technology' (firewalls, caches, proxy services, etc), mail services and Web-based applications (website hosting, Intranets, Extranets, etc).
–	You require a flexible pricing plan that fits your business model – rather than having one imposed upon it by an Internet Service Provider.

WHAT'S INCLUDED?

–	Maximum 2Mbps Frame Relay access to your site including the Network Terminating Unit (NTU).
–	A range of speed options from 64Kbps to 2Mbps.

WHAT ELSE CAN BE PROVIDED?

–	Telecom managed routers.
–	Security and consulting services.
–	Daily traffic statistics report.
